

Storage Optimization Review

Speed
Insight
Efficiency

Leverage Storage Insights to transform data visibility into performance and cost savings.

Our Storage Optimization Review offers a strategic deep dive into your data landscape. By analyzing how storage is used across environments, this assessment helps uncover inefficiencies and opportunities for improvement. It lays the foundation for smarter data management, cost control, and long-term scalability.

- ✓ Identify top storage-consuming tables
- ✓ Gain visibility into your environments
- ✓ Evaluate current optimization efforts
- ✓ Reduce database volume
- ✓ Lower infrastructure and storage costs
- ✓ Improve system performance

What's included in the assessment?

Kick-off & Discovery

Initial alignment on prerequisites, infrastructure (OTAP), tooling, deliverables, resources and roadmap. Gathering information related to the current data usage and growth rate. Define correlation with business processes.

Discovery Review & In-depth analysis

Transparent insights related to our first findings. Conduct key insights into data usage and define optimization actions.

Closing meeting & evaluation report

Sharing final conclusions, including action list and responsibilities. Formal report containing the topics that have been discussed during the closing meeting.

What do we need from you?

- ✓ Access to a development environment
- ✓ A non-production environment with a weekly backup from production
- ✓ Usage profile from LCS
- ✓ Details about the current capacity
- ✓ List of cleanup scripts & archiving functionality
- ✓ Availability of stakeholders

What can you expect from the assessment?

Optimization proposition related to your current application environments.

A (custom) cleanup/archiving method proposition per relevant table. This proposition will prioritize the tables, based on the data growth and important business domains.

Optional training proposals to improve your understanding of database usage, archiving and associated costs.

Ready to explore the possibilities?

For all the above, a workload estimation will be provided for execution and/or coaching sessions.

For more information on what this could look like for your organization, simply reach out to your account manager.
