

Devops Integration

Discover the ultimate solution to supercharge your DevOps project - introducing our cutting-edge DevOps Integration program! Unleash the true potential of your development process with our best-practice and standard approach, meticulously crafted to deliver unparalleled results.

Targeted Delivery Tools

Our program caters to your specific needs, supporting two delivery powerhouses - Azure DevOps and GitHub. Seamlessly switch between these platforms and experience a whole new level of productivity and collaboration.

Core Building Blocks

With a keen focus on Azure Repos and Azure Pipelines for Azure DevOps, and GitHub Repositories and GitHub Actions for GitHub, we lay the foundation for a git flow driven environment (GitOps) with automated deployments.

Unveil the Potential

Our program provides an insightful overview of the extensive services offered by both tools. Explore their capabilities and unleash the full potential of your DevOps journey.

Streamlined Automated Deployments

For provisioning the automated deployments there are currently three powerful templating languages that are supported - ARM Templates, Bicep, and Terraform.
