

# Copilot

Maximizing GitHub's Potential

## What is GitHub Copilot?

GitHub Copilot is an AI pair programmer that **helps you write code faster** and with less work. It draws context from comments and code to suggest individual lines and whole functions instantly. GitHub Copilot is powered by a generative AI model developed by GitHub, OpenAI, and Microsoft. It is available as an extension for Visual Studio Code, Visual Studio, Neovim, and the JetBrains suite of integrated development environments (IDEs).

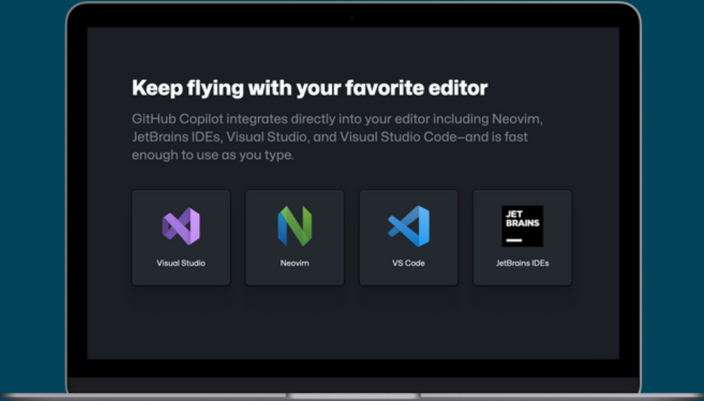

**74%** focus on more satisfying work

**88%** feel more productive

**96%** are faster with repetitive tasks

## The future - Copilot X

GitHub Copilot X represents the future vision of GitHub Copilot, **extending its capabilities** across the developer's workflow. It aims to be an AI assistant, deeply integrated into the entire development lifecycle, providing code completion, answering questions, and simplifying complex tasks. With features like **GitHub Copilot Chat** and **GitHub Copilot Voice**, it redefines developer productivity, empowering them to focus on innovation while AI handles repetitive tasks. The vision is to make development smoother, more efficient, and enjoyable, accelerating human progress in the world powered by software.

## Get the most value

Cegeka offers a comprehensive training, with **actionable examples**, showcasing **integration possibilities**, and valuable **tips and tricks** for GitHub Copilot.

Additionally, we provide a **free Pilot/Proof of Concept (POC) engagement**, fully funded by Microsoft upon nomination, allowing customers to explore Copilot's capabilities and its impact on development workflows.
