

# GitHub Foundation

Maximizing GitHub's Potential

Cegeka offers a GitHub foundation program **tailored** for your organization. This program is designed to help companies and their teams develop a **comprehensive understanding of GitHub**. It includes a basic workshop, GitHub setup, an assessment (manual, with an automated version coming soon), and detailed reporting through dashboards (investigating logs and APIs). Additionally, as a CSP provider, we take care of the GitHub licensing, ensuring a **seamless experience**. This program is ideal for organizations looking to enhance their team's skills in **code management and collaboration** on development projects.

GitHub Workshop

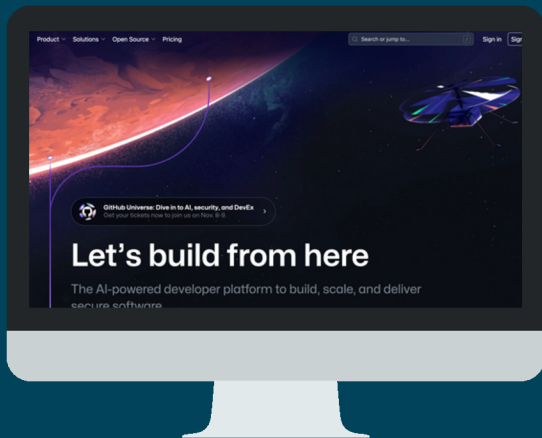

GitHub Setup

GitHub Assessment

Dashboard Insights

The basic GitHub workshop covers GitHub plans and pricing, advanced security features like code scanning and secret scanning, and GitHub Copilot. It also includes an overview of GitHub features such as projects, actions, workflows, environments, branch rules, and runners, along with a demo of these features. This comprehensive workshop ensures that participants **gain a solid foundation in using GitHub effectively**.

The GitHub setup is designed to be comprehensive and tailored to each customer's needs. It includes **establishing policies and governance frameworks** to ensure that the use of GitHub aligns with the organization's standards and requirements. The setup also involves **creating and organizing repositories**, as well as managing teams and users to **facilitate efficient collaboration and access control**. This ensures that the entire team can work seamlessly and securely within the GitHub environment.

Our GitHub assessment is thorough and covers key areas to ensure optimal use of the platform. It includes a **review of policies and governance** to ensure compliance with organizational standards. The assessment also examines the **structure and management of repositories**, as well as the management of teams and users to ensure efficient and secure collaboration practices. This comprehensive assessment helps **identify areas for improvement** and ensures that GitHub is being used to its **full potential**.
